RE: Projects IR-194-4(053)000 and
F-1-094(007)920 - Memorial Bridge

The PS & E for the Memorial Bridge project is scheduled for July 12, 1990, at 8:30 a.m., in room 330 of the Highway Building.

Enclosed are preliminary plans for the roadway portion of the projects. Bridge plans, as well as plans for signing, marking, and lighting, will be mailed separately in approximately three weeks.

NOTES

100 011 GENERAL: The engineer will attend to the removal of existing fences to the highway right of way line and to the relocation or adjustment of utility facilities as shown on the plans. Equipment shall work around utility poles, within the area, that are not to be disturbed.

100 020 WORK SCHEDULE: In order to minimize interference with traffic operations, a detailed schedule shall be agreed to prior to beginning work, between the engineer, utility companies, and the contractor and subcontractors, if any.

100 021 WEEKLY PLANNING/REPORTING MEETING:

A. Purpose of Weekly Meeting.

1. Purpose of Weekly Meeting.

B. Contractor's Project Manager/Superintendent: Planning and Reporting.

1. The contractor will be required to provide a written schedule of the next week's work and a tentative schedule of the following week.

2. The contractor will be responsible for sending a knowledgeable representative to conduct a weekly Reporting/Planning meeting.

3. Reporting/Planning meeting will include discussion of problems encountered during the current week; information of interest to local authorities, subcontractors, utilities, and next week's prospective schedule.

4. The contractor will organize the weekly meeting contacting interested agencies. These agencies include, but are not limited to, the following:

a. State Highway Department.
b. City Engineer's representative.
c. Police department.
d. Fire department.
e. Ambulance service.
f. Telephone Co.
g. Power Co.
h. Cable T.V.
i. Gas Co.
j. Railroad Co.
k. Subcontractors.
l. Chamber of Commerce.

100 030 UNDERGROUND UTILITIES: The contractor shall notify the local utility companies prior to the beginning of construction, so they may determine the location of all utilities in the project area. Subcutting or scarifying over utility lines may be eliminated if, in the opinion of the engineer, a hazardous situation exists. Separate plans, if any, showing relocation or adjustment work to be performed by utility companies to accommodate highway construction will be made available to the contractor, upon request to the engineer.

100 060 DETOURS: The contractor shall maintain the streets used as detours (streets to be designated by the engineer) and repair areas damaged by the detoured traffic. Upon completion of the project, the contractor shall restore the streets to a condition at least equal to that which existed at the time traffic was routed over them. Work shall be as deemed necessary by the engineer. The repair and maintenance of the detours will be paid for in accordance with Section 107.05 B of the Standard Specifications - Haul Roads. Necessary route markers will be furnished by the state highway department and erected and maintained by the contractor as an incidental item.

100 070 PAVEMENT PROTECTION: The contractor shall protect the existing pavement during the course of construction. Surface repair which is required because of the contractor's operations shall be repaired by the contractor at the contractor's expense. Normal maintenance of existing pavement shall be performed by the State Highway Maintenance forces.

100 130 TREES, SHRUBS, AND NATIVE GRASSES: The contractor shall exercise care in his construction operations to ensure that trees, shrubs, and native grasses within the right of way and outside the construction area are not disturbed.

100 133 The contractor will be required to conduct the construction activities in such a manner as to comply with the Air Pollution Control Regulations of the state of North Dakota. Water will be used to control dust on the construction site.

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	IR-194(053)000	

NOTES

100 145 CONTRACTOR LOCATED AGGREGATE AND/OR BORROW PITS: Prior to surface disturbance or removal of material from a contractor located pit, the contractor shall provide the North Dakota Department of Transportation (NDDOT) with the legal description of the location of the pit. The NDDOT will review this information to determine the probability of any significant cultural resources being affected. The contractor shall submit this information to the NDDOT at least fourteen days prior to stripping the surface or removing any material from the pit. If the NDDOT determines that there is a moderate or higher potential for cultural resources to exist in the affected area, the contractor will be required to obtain the State Historical Preservation Officer's (SHPO) clearance before any material from the pit will be accepted. In order to obtain SHPO clearance, the contractor will be responsible for having a cultural resource survey conducted by a qualified archeologist. They survey shall be submitted to the NDDOT. NDDOT will coordinate with the SHPO once the cultural resource survey is received. Apart from an extension of time, no payment or claim for any damages shall be made to the contractor as compensation for damage for any delays or hindrances from any cause whatsoever in the progress of the work because of this required review. This review conducted by the NDDOT will not relieve the contractor of any responsibility for complying with all federal and state laws and regulations concerning the preservation of cultural resources that are discovered during the operation of the pit. The NDDOT will not participate in the cost of complying with federal or state laws and regulations regarding the salvage or preservation of cultural resources that are discovered during operation of the pit.

105 110 PAVEMENT SWEEPING: The contractor shall sweep new pavements before opening to traffic and for final acceptance. For this sweeping, the contractor shall furnish and utilize a vacuum type sweeper to control the dust. All costs connected with this work shall be included in the price bid of other items.

200 010 SHRINKAGE: 20 percent additional volume in yardage computed by the end area method is allowed for shrinkage in earth embankment.

200 057 TREE REMOVAL: Tree removal within the right of way limits is not a separate pay item. The cost of tree removal shall be incidental to the price bid for "Clearing and Grubbing."

200 060 PAVEMENT REMOVAL: All concrete and pavements paid for as removal shall be deducted from the excavation quantity.

200 080 CONCRETE REMOVAL: Removal of P.C. Concrete sidewalks and driveways shall be paid for as "Removal of Concrete."

200 130 TOPSOIL: Total topsoil from clearing and grubbing areas is approximately _____ cubic yards.

200 252 WASTE DISPOSAL: All excess excavation and old concrete sidewalks, driveways, curb and gutter, pavement, bituminous surfacing, etc., shall be disposed of off the highway right of way at a site selected by the contractor and approved by the Engineer. Disposal in wetland areas will not be approved. The cost of disposal (and obtaining of the disposal area) shall be included in the price bid for other items.

200 300 WATER: The quantity shown for water is the estimated amount required for the aggregate base course and to serve as dust palliative. Water for grading operations shall be paid for as "Moisture Control."

200 301 WATER: The cost of applying water for compaction and for use as a dust palliative, as required, shall be included in the price bid for "Water."

200 360 COMPACTION AND DENSITY CONTROL: Compaction and density controls shall be in accordance with Section 203.02 F of the Standard Specifications _____.

400 050 AUTOMATIC BATCHING EQUIPMENT: The automatic batching equipment as specified in AASHTO M-156 will not be required on this project.

400 080 HOT BITUMINOUS PAVEMENT: The 8" hot bituminous pavement shall be laid in 3 (3) lifts with the top lift having a depth of approximately 2 inches.

400 100 OLD BITUMINOUS PAVEMENT: The old bituminous pavement removed under the pay item "Removal of Bituminous Surfacing," shall become the property of the contractor.

550 130 CONCRETE PROTECTION: Adjacent P.C.C. Pavement shall be protected during the application of all bituminous and asphalt materials to prevent any discoloration of the pavement. Failure to comply will result in the contractor having to clean the pavement at the contractor's own expense. The P.C.C. Pavement slab shall not be used as a table for stockpiling, mixing, or drying of any material.

704 010 MAINTAINING ACCESS: The contractor will be responsible for providing access to all residential dwelling and business establishments adjacent to this project. Final details on location of access points and construction procedures shall be worked out with the engineer in the field prior to start of the project.

FHWA REGION	STATE	FED. AID PROJ NO	SHEET NO
8	N.D.	IR-194(053)000	

NOTES

704 TRAFFIC CONTROL:
015 A. The contractor shall provide a qualified traffic maintenance person with the following minimum qualifications:

1. This person shall:

a. Have completed a course of study based on the MUTCD and furnish proof.

b. Be conversant with the contents and intentions contained within the MUTCD and the NDSHD Specifications.

c. Have previous experience working with maintenance and protection of traffic.

d. Be competent to supervise personnel with lessor training in traffic maintenance operations.

e. Be present on the project on a daily basis unless released by the engineer.

2. Duties:

a. To provide traffic control as required by the plans, Standard Specifications, Special Provisions, or MUTCD or as directed by the engineer.

b. The traffic control person shall provide documentation of each day's inspection results and remedial activities.

3. All costs associated with the above requirements shall be included in the price bid for the traffic control items.

704 TRAFFIC CONTROL DEVICES LIST: The quantity listing for traffic
040 control construction area has sufficient quantities for traffic control at all sites. The contractor will be paid for the signs and devices used at each site even though he may move signs from one completed site to the next.

708 SODDING: Sodding quantities have been provided to sod
010 construction areas where the adjacent property has sod established. Sodding locations will be determined by the engineer.

900 RIVER ROAD IMPROVEMENTS: Three hundred thirty-five (335) feet of
P01 River Road improvements (city funds only) are included in these plans. The contractor's attention is directed to sheets identified "River Road Improvements" for special notes, incidental items, and special details which pertain only to that section of roadway. The items "Reset W-Beam Gaurdrail" and "Reset W-Beam Guardrail - Flared End Treatment and Transition" include all labor and materials for removal and resetting existing guardrails and flared ends. Access shall be maintained to local residential dwellings on River Road during construction.

Preformed compression joint seals of other shapes may be used. The shape and dimensions must be approved by the Engineer.

All transverse doweled contraction joints and the keyed non-tied longitudinal shall be sealed as shown in the detail Contraction Joint Silicone Seal.

The hot poured elastic type joint filler shall meet the requirements of section 826.02 A.2 of the standard specifications.

TEMPORARY ACCESS

(Access to Captain Leach Drive and Captain Marsh Drive)

The contractor has four options to provide temporary access to this area during construction of the west approach structure as shown on this sheet. Regardless of the option selected the contractor will be required to develop and install, subject to approval of the Engineer, a signing layout. The duration of this temporary access detour shall be kept to the minimum time possible as approved by the Engineer. The Engineer may approve additional options to serve the area.

Alternate 1 - Construct a temporary gravel surfaced (4" depth) two-lane approach. Provide a 48" stop sign as shown for Sign No 13.
Alternate 2 - Maintain traffic on Marina Road. Provide canopy for traffic protection.
Alternate 3 - Construct a temporary gravel surfaced (4" depth) two-lane detour roadway. Provide canopy for traffic protection.
Alternate 4 - Obtain easements from property owners for temporary traffic routing on private property. Provide canopy for traffic protection.

The requirement for a canopy can be waived, subject to approval of the Engineer, if the contractor elects to switch traffic from one alternate to another using a sequence of operation which, in the opinion of the Engineer, will provide adequate protection to the traffic.

If a canopy is constructed the canopy is considered to be an added safeguard and does not relieve the contractor of any responsibility for the safety of the public.

Approval by the engineer shall be for plan and specification compliance and not for the structural adequacy of the canopy.

The canopy must be erected before the concrete deck is removed and remain in place until after the new deck is complete. The canopy must be supported from the ground. The erection of the canopy shall be completed in a minimum amount of time and with the least inconvenience to the public, and applies to the roadway open to public use. ?
This provision applies to that portion of the roadway open to public use?

The canopy shall be of a design and material selected by the contractor and approved by the engineer. The minimum vertical clearance from the traveled roadway to the bottom of the canopy shall be 13'-6". The canopy shall project a minimum distance of 5'-0" beyond the outside edge of curb of the proposed structure.

The canopy shall project a minimum distance of 5'-0" beyond the edge of the driving lanes beneath the structure.

After completion of the structure, the canopy shall be removed and shall remain the property of the contractor.

The lump sum bid for "Temporary Access" shall be full compensation for furnishing, installing, maintaining, relocating, and removing traffic control items, canopies (if any), flagging, temporary roadways, and easements (if any).

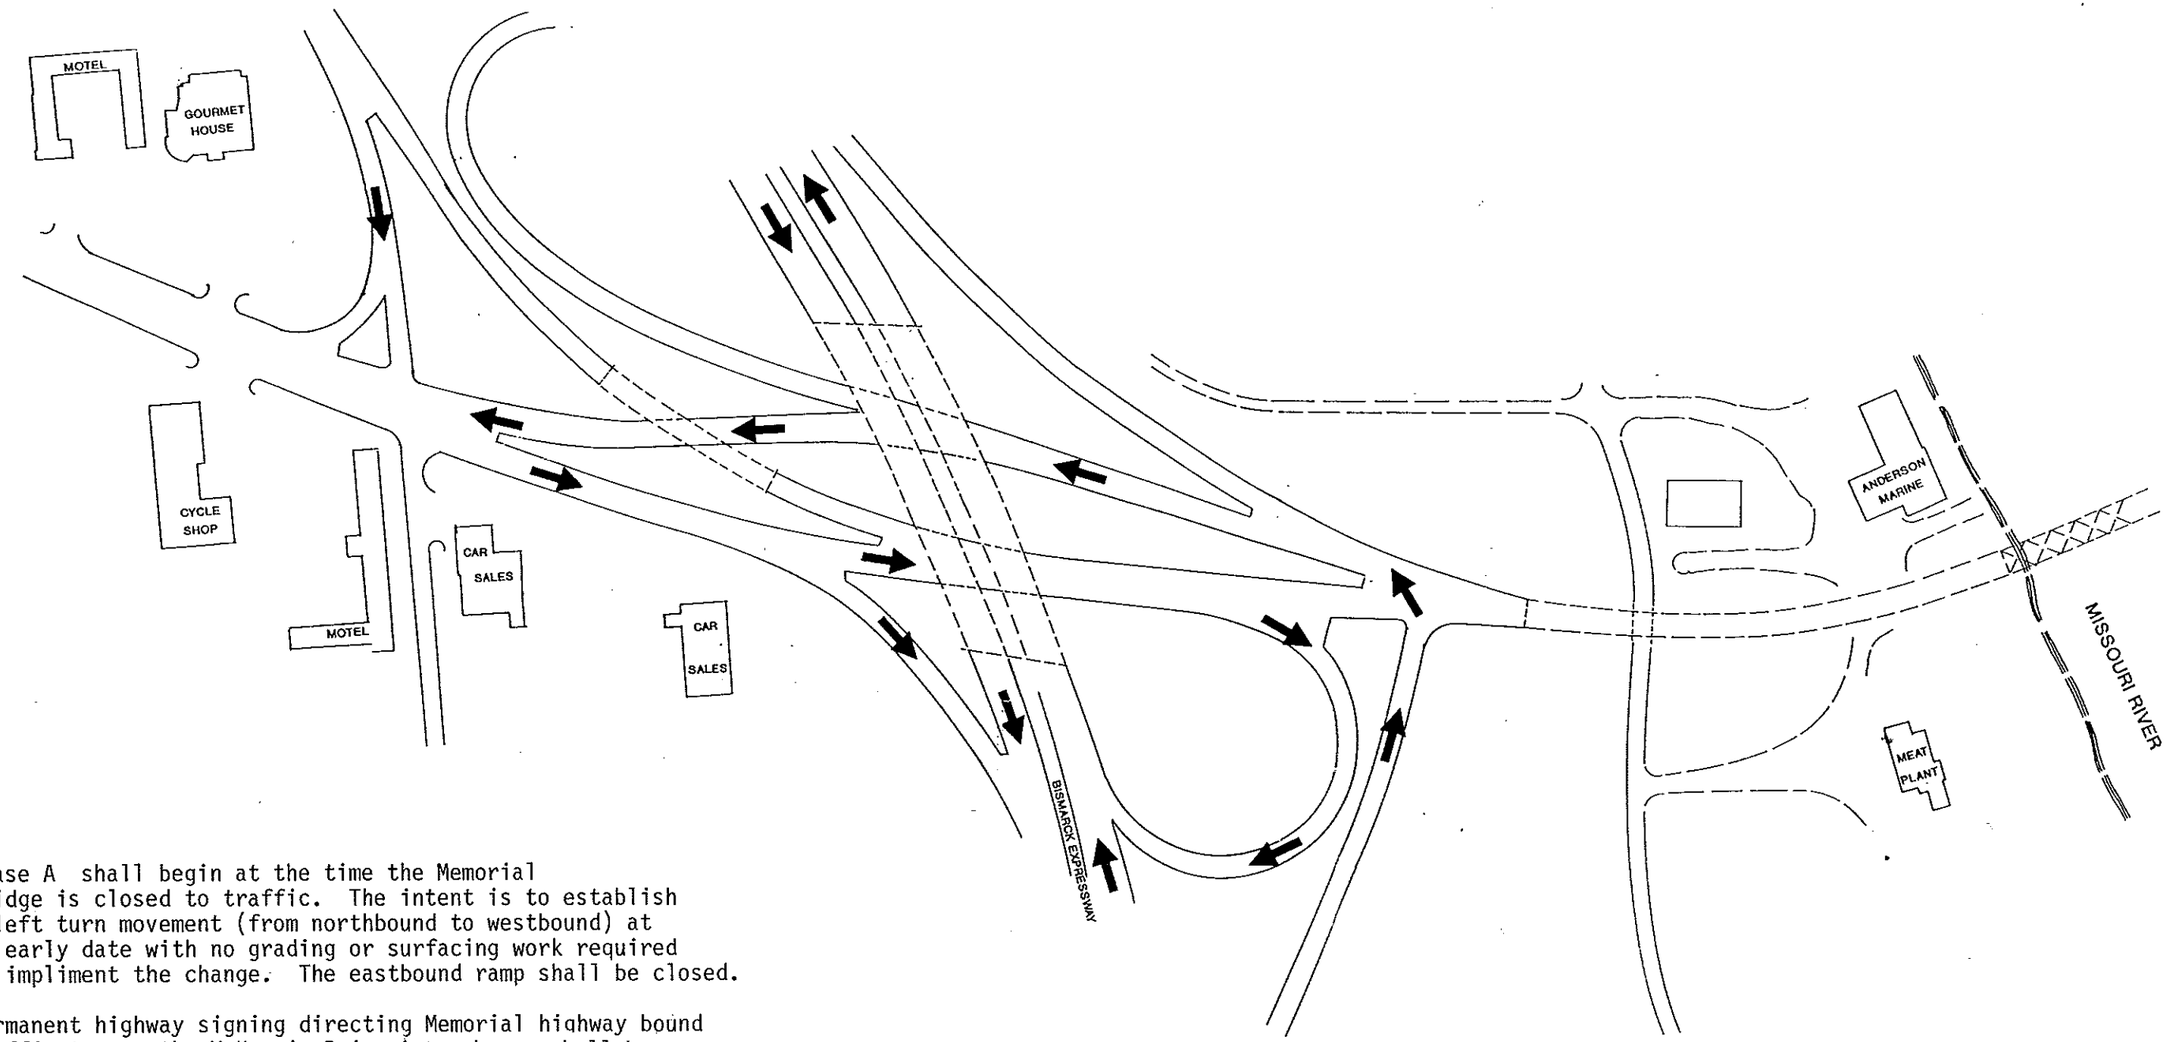
INTERCHANGE CONSTRUCTION PHASE A



Phase A shall begin at the time the Memorial Bridge is closed to traffic. The intent is to establish a left turn movement (from northbound to westbound) at an early date with no grading or surfacing work required to impliment the change. The eastbound ramp shall be closed.

Permanent highway signing directing Memorial highway bound traffic to use the McKenzie Drive interchange shall be removed or covered.

Permanent highway signing directing traffic toward Bismarck Main Avenue using Memorial Bridge shall be removed or covered. All removed or covered signs shall be reinstalled or uncovered upon completion of construction or as directed by the Engineer.

Temporary widening of the S.E. loop and the construction of a temporary taper between the S.E. ramp and the S.E. loop shall be completed prior to diverting traffic as shown for Phase B.

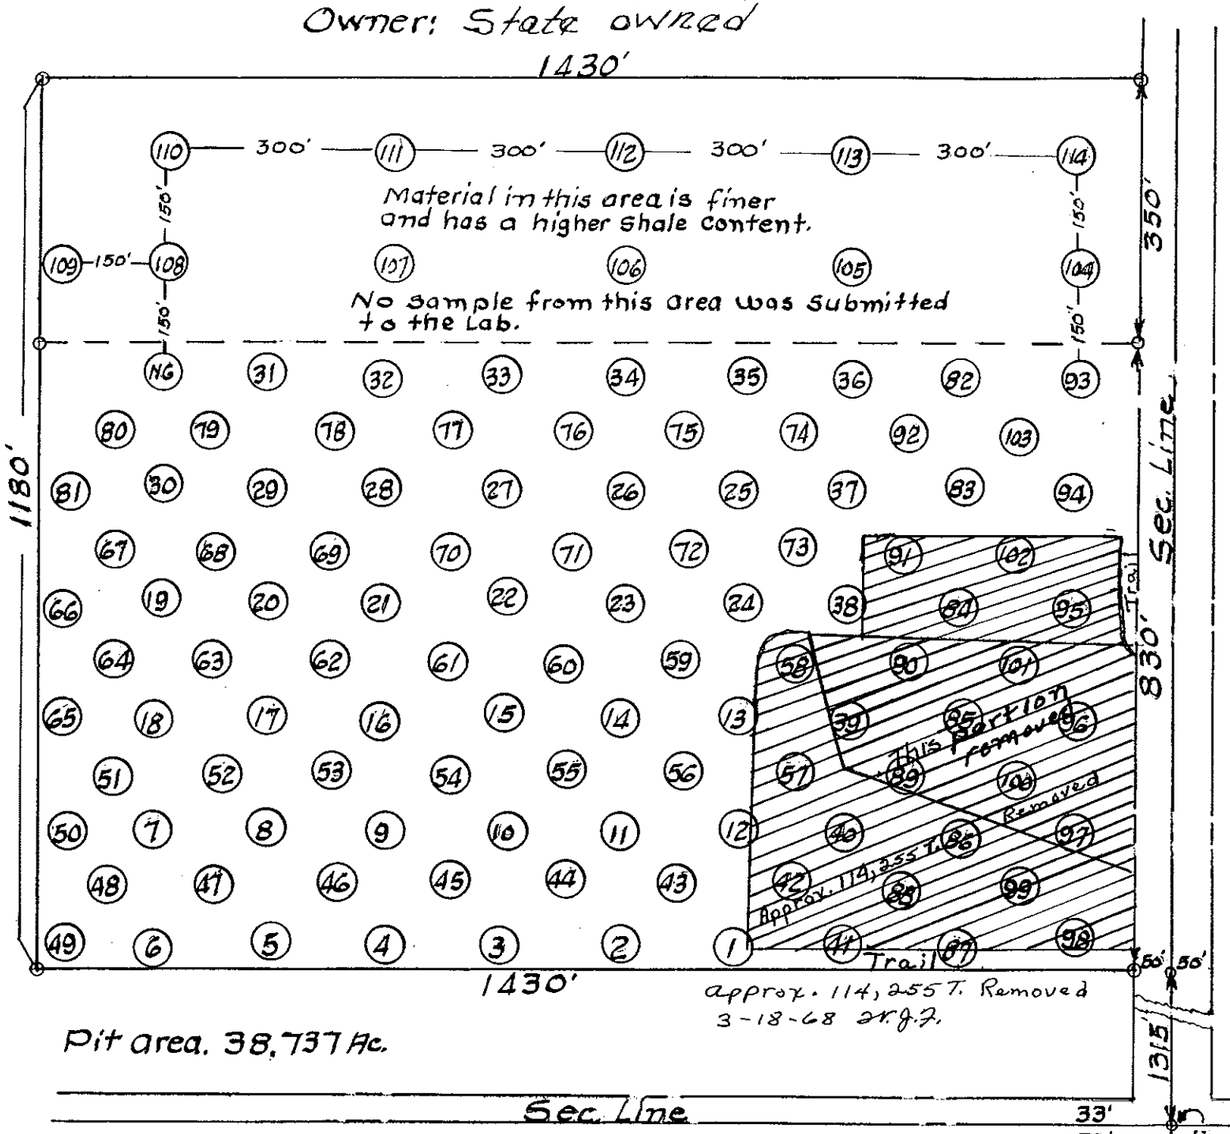
FORM NO. 218

NORTH DAKOTA STATE HIGHWAY DEPARTMENT
TEST HOLE PLAT

SE¼ Sec. 28, T. 140, R. 77

Owner: State owned



Notes:

In general the material in this deposit lies in layers of sand and gravel therefore, material shall be removed to the full depth shown by test hole and well mixed to produce uniform gradation. Pit operation shall be started on the east end and worked in a westerly direction. Pit operation shall be conducted in a manner not to strip more area than what is needed at any one time.

It is agreed that after the sand and gravel has been removed the top soil or stripping shall be replaced in open pit and smoothed, leaving the pit sides as flat as possible

STA. 57+66.81 TO STA 61+01.78
RIVER ROAD

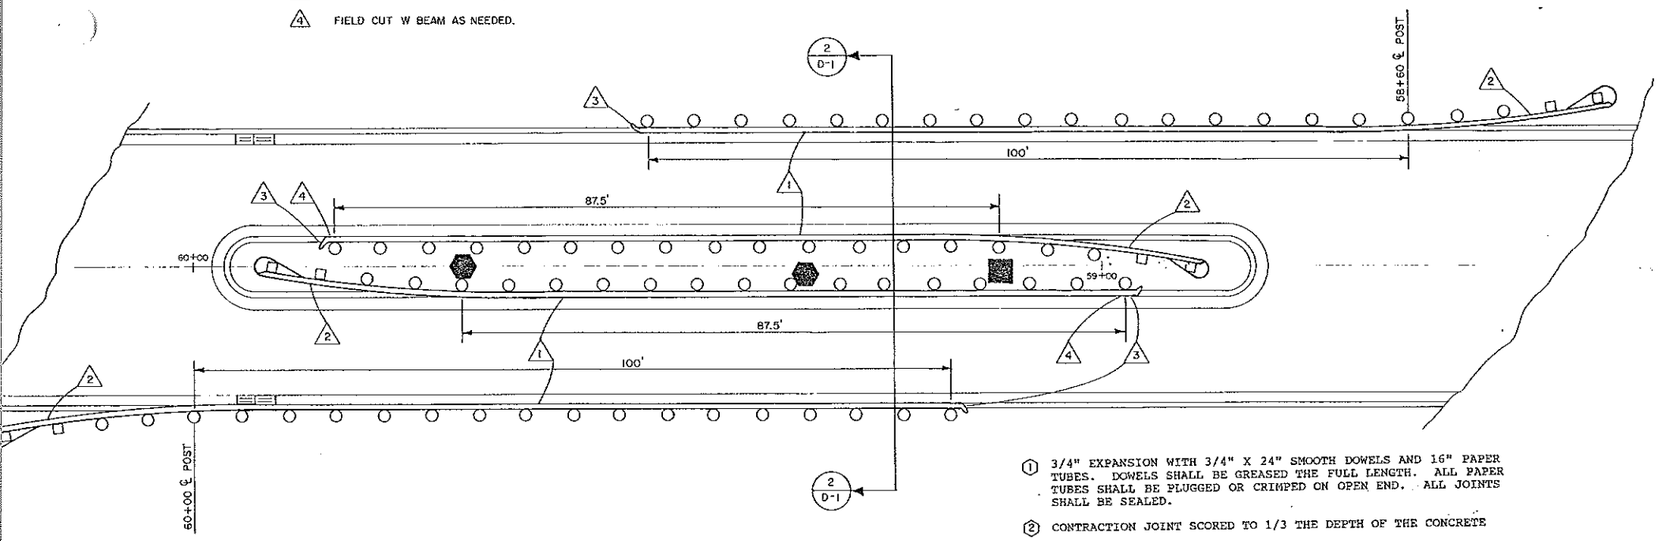
ULTEIG ENGINEERS, INC. CONSULTING ENGINEERS • ARCHITECTS
FARGO • BISMARCK • MINNEAPOLIS

DRAWN BY: BJH	SCALE: AS SHOWN	PROJECT NO. 88670
CHECKED BY:	DATE: MAR 1989	SHEET P-1 of
APPROVED BY:		

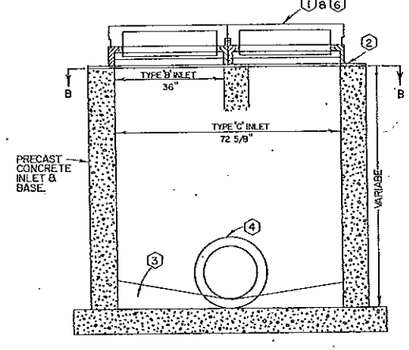
ULTEIG ENGINEERS

CONSTRUCTION NOTES

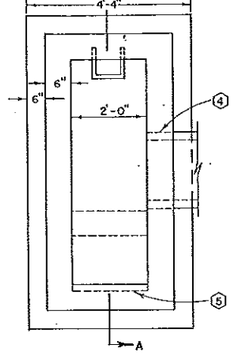
1. W BEAM GUARDRAIL TO BE FURNISHED IN ACCORDANCE WITH NDSHD STANDARD SPECIFICATIONS. INSTALL W BEAM GUARDRAIL AS DETAILED ON PAGES D-764-1 AND D-764-2 OF NDSHD STANDARD CONSTRUCTION DRAWINGS.
2. INSTALL TRANSITION AND BUFFER END SECTION AS DETAILED ON D-764-2.
3. INSTALL FLARED END SECTION, MEASURED AS GUARDRAIL.
4. FIELD CUT W BEAM AS NEEDED.



1 D-1 W BEAM GUARDRAIL LAYOUT DETAIL
SCALE 1" = 10'



SECTION A-A

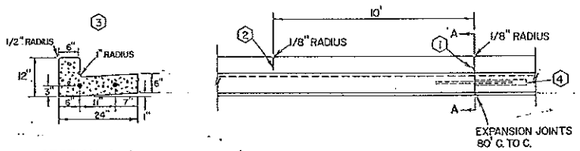


SECTION B-B

1. TYPE "B" INLET CASTING SHALL BE NEENAH FOUNDRY NO. R-3067 WITH TYPE V GRATE OR AN APPROVED EQUAL. TYPE "C" INLET CASTINGS SHALL BE NEENAH FOUNDRY NO. R-3295 WITH TYPE V GRATE OR AN APPROVED EQUAL.
2. ALLOWANCE FOR ADJUSTMENT - 1 1/2" MIN. TO 3" MAX. ADJUST HEIGHT BY USE OF BRICKS AND OR GROUT, GROUT TO BE BETWEEN ALL SURFACES.
3. GROUT INLET INVERT TO PROVIDE SMOOTH POSITIVE DRAINAGE TO PIPE.
4. WATERTIGHT SEAL AROUND PIPE.
5. PROVIDE CASTING NOTCH AT BOTH ENDS FOR TYPE "C" INLETS.
6. BOLTS FOR CASTING SHALL BE TEMPER FINISH - DOUBLE HEAT TREATED - 1038 S.A.E. GRADE 5, WITH CAD-DICHROMATE PLATING. BOLT REQUIREMENTS FOR TYPE "B" INLET: 3 - 1/2"0X21/2" BOLTS WITH 1 NUT AND 1 WASHER, OR AS REQUIRED BOLT REQUIREMENTS FOR TYPE"C" INLET: 2 - 1/2"0X41/2" BOLTS WITH NUT AND 8 WASHERS AND 4 - 1/2"0X21/2" BOLTS WITH NUT AND WASHER EACH, OR AS REQUIRED.ON MULTIPLE TYPE INLETS, WASHERS SHALL BE USED AS SPACERS BETWEEN THE CASTINGS TO ATTAIN PROPER AND STABLE ALIGNMENT OF THE CASTINGS. ON SINGLE INLETS AND THE END CASTING OF MULTIPLE INLETS, THE BOLTS SHALL BE PLACED WITH THE NUTS ON THE OUTSIDE OF THE CASTING. NUTS SHALL HAVE A 3/8" BAR 3" LONG WELDED TO THE SIDE OF THE NUT IN SUCH A MANNER AS TO ALLOW PROPER TIGHTENING OF THE BOLT. WELDED NUT AND BAR SHALL BE COATED TO PREVENT RUSTING.
7. WALLS TO BE REINFORCED WITH #4 @ 14" O.C./E.W. @ ℄ WALL. REINFORCE BASE SLAB WITH #4 @ 15" O.C./E.W., ADDITIONAL 2 - #4 CONTINUOUS AROUND EDGE

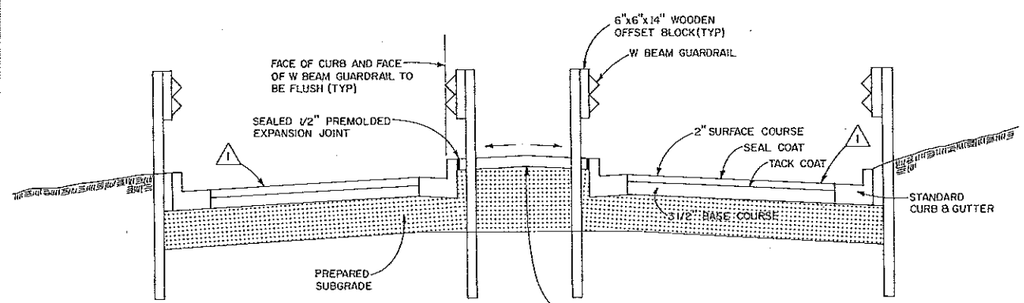
3 D-1 TYPE "B" & "C" INLETS
NOT TO SCALE

1. 3/4" EXPANSION WITH 3/4" X 24" SMOOTH DOWELS AND 16" PAPER TUBES. DOWELS SHALL BE GREASED THE FULL LENGTH. ALL PAPER TUBES SHALL BE PLUGGED OR CRIMPED ON OPEN END. ALL JOINTS SHALL BE SEALED.
2. CONTRACTION JOINT SCORED TO 1/3 THE DEPTH OF THE CONCRETE
3. CURB AND GUTTER SHALL BE 6" AND UNREINFORCED UNLESS OTHERWISE SPECIFIED.
4. DOWELS SHALL BE SUPPORTED BY AN APPROVED SUPPORT MADE OF NO. 7 AWG WIRE.



SECTION A-A

4 D-1 STANDARD CURB & GUTTER
NOT TO SCALE



CONSTRUCTION NOTES

ASPHALT PAVEMENT SHALL MEET THE REQUIREMENTS FOR CLASS B MIX AS PER C[illegible] BISMARCK'S STANDARD SPECI[illegible]NS.
